

RUYANGE ARNOLD

FULL STACK DEVELOPER

CONTACT

Phone: +250-796-607-429

Email: ruyangearnold@gmail.com

Location: Kigali, Rwanda

Website: arnold-rho.vercel.app

GitHub: github.com/Arn-The-Wolf

SKILLS

Project Management & Leadership
Testing, CI/CD & Agile Delivery
Cybersecurity & OWASP Practices
TensorFlow & Machine Learning
Docker, MQTT/IoT & GitHub Actions
PostgreSQL, MySQL & MongoDB
REST APIs & Server Actions
HTML5, CSS3, Tailwind & Material-UI
Node.js, Python & Java
React.js, Next.js & TypeScript

LANGUAGES

English (Fluent)
French (Basic)
Kinyarwanda (Native)

REFERENCE

PROFILE

My name is **Arnold RUYANGE**, a Full Stack Developer based in Rwanda. I studied at Rwanda Coding Academy and have built production applications across fintech, marketplaces, e-commerce, IoT, and AI. I combine strong frontend craftsmanship with backend engineering in Python, Java, and Node.js — shipping secure APIs, scalable architectures, and polished user experiences under real-world deadlines.

WORK EXPERIENCE

Carconnect.rw 2024 – Present

Full Stack Developer

Built responsive marketplace interfaces with reusable React components and maintainable state patterns.

Integrated REST APIs for listings, authentication, and real-time customer account experiences.

Collaborated with product and backend teams to ship reliable features across iterative release cycles.

Credora 2024 – Present

Frontend Developer

Delivered Login, Signup, Dashboard, and password recovery flows using React.js and Material-UI.

Implemented form validation, API integrations, and error handling for production fintech users.

Deployed and monitored releases on Vercel with consistent branding and cross-browser quality.

Freelance & Open Source 2020 – Present

Full Stack Developer

Architected Next.js portfolios, Java desktop systems, Python data pipelines, and MQTT IoT platforms.

Built CNN handwriting recognition, weather monitoring dashboards, and e-commerce applications end to end.

Maintains flagship open-source repositories on GitHub with clean architecture and documentation.

EDUCATION

Software Development & Embedded Systems 2023 – 2026

Rwanda Coding Academy

GPA: 3.8 / 4.0

Focused on full-stack web development, mobile foundations, embedded systems, advanced cybersecurity and software engineering practice.

PROFESSIONAL OVERVIEW

RUYANGE ARNOLD | FULL STACK DEVELOPER | Kigali, Rwanda

CAREER SUMMARY

Arnold RUYANGE is a Full Stack Developer based in Kigali, Rwanda, specializing in React, Next.js, TypeScript, Python, and Java. He has delivered production systems for fintech and marketplace clients while maintaining a strong open-source portfolio spanning AI, IoT, data engineering, and enterprise web applications. He is recognized for clear communication, disciplined engineering, and the ability to own features from database schema to deployed UI.

SELECTED PROJECTS

Elite Professional Portfolio — Next.js 14 full-stack portfolio with App Router, TypeScript, React Three Fiber, admin CMS, 15+ REST APIs, GitHub integration, Resend contact pipeline, and production security headers.

- **Handwriting Recognition AI** — Machine learning project implementing CNN architecture for handwriting recognition. Trained on large datasets to classify handwritten digits and text with high accuracy.
- **mqtt-weather-app** — IoT weather monitoring application that collects environmental data through MQTT protocol. Built with Python and Flask, processes real-time sensor data from connected weather stations. GitHub stars: 1.
- **arnshop** — A complete e-commerce solution for electronic devices. Features product catalog, shopping cart, order management, and an interactive Java GUI. Demonstrates full-stack Java development skills. GitHub stars: 1.
- **Credora** (Production Fintech) — Live fintech frontend: React, Material-UI auth flows, dashboards, API integration, and Vercel deployment.
- **Carconnect.rw** (Production Marketplace) — Automotive marketplace UI with reusable React components, API-driven listings, and responsive cross-device design.
- **webscraping** — A Python web scraping project using BeautifulSoup to extract structured data from multiple pages. Ideal for data collection and analysis pipelines. GitHub stars: 2.
- **arnlibrary** — Complete Library Management System in Java with GUI. Manages book inventory, student borrowing records, due dates, and administrative operations.

TECHNICAL COMPETENCIES

Frontend: React, Next.js, TypeScript, Astro, HTML5, CSS3, Tailwind CSS, Material-UI, Framer Motion, responsive design

Backend: Node.js, Python, Java, Flask, REST APIs, GraphQL, server actions, authentication, data modeling

Data & AI: PostgreSQL, MySQL, MongoDB, TensorFlow, CNN pipelines, web scraping, structured data extraction

DevOps & IoT: Docker, GitHub Actions, MQTT, CI/CD, Vercel deployment, monitoring, secure coding practices

PROFESSIONAL STRENGTHS

Translates product requirements and Figma designs into maintainable, production-ready full-stack solutions.

Collaborates effectively with designers, backend engineers, and stakeholders in fast-paced delivery environments.

Writes clean, documented code and continuously improves system performance, security, and user experience.
